

## **Adjustable Pull –Down Pole Kits**

Adjustable Pull-Down pole expands from 42”-72”, allowing the user to reach most attic stairways from floor level without using a stool or ladder for assistance. The solid plastic hook is reinforced with a metal bar to add additional strength and durability. Pole comes with a soft grip handle for ease and comfort of use. A metal hanger is attached to the handle to allow for out of the way storage when not in use.

Kit includes a hard plastic door hook and decorative base assembly that is easily attached to a new or existing Century Attic stairway. For previously purchased attic stairways, installation requires replacing the existing pull-cord system.

The kit also includes an aluminum step hook assembly that can be added to existing Century aluminum stairways to use the Pull-down Pole to aid the user with folding and unfolding the stairs from floor level without assistance. This part can be moved to different steps to allow for individual user conditions.

The door hook and decorative base assembly are paintable.

Kits may be purchased individually or in “master cartons” of 15 kits per carton.

Adjustable Pull-Down poles come standard with all Century 12’ Attic Stairways.
